History In 1998, an AutoCAD RTL release incorporated the new object-oriented programming technology, including version-independent programming. Version 4.0 was the first version of AutoCAD to be released for the 32-bit Microsoft Windows operating system. AutoCAD 2005 for Windows was released with Release 15 of the AutoLISP programming language. This release added a new style of programming with short and concise code. The system for object-oriented programming was first released with AutoCAD R14. In addition, AutoLISP was revised to include an object repository. Version history AutoCAD is a registered trademark of Autodesk, Inc. Autodesk released AutoCAD for Windows on April 14, 1999, as a 64-bit application. AutoCAD for Windows allowed large files to be opened up for editing. A further 64-bit upgrade, AutoCAD 2000, was released on October 24, 1999. AutoCAD 2000 allowed drawing in resolutions greater than 1,200 dots per inch (DPI). AutoCAD 2000 also featured a number of user interface enhancements and a comprehensive 3D modeling feature. Large drawings As of version 2015, AutoCAD supports drawing files up to 3,900 MB in size. AutoCAD has supported this limit since its release in 1999. AutoCAD has supported the ability to open large drawing files for a number of years, however this capability became widely available with the release of AutoCAD 2000. Until AutoCAD 2000, only a few desktop applications allowed editing of large drawing files, primarily including GeoGebra and some older versions of MicroStation. Drawing conversion AutoCAD provides built-in conversion utilities for many drawing file types. These utilities can be accessed via the application, which displays a preview of the conversion operation, or through the Application ribbon. In addition, a number of third-party utilities are available to convert between different file types. What is the GlobalProjector The GlobalProjector is a tool that project a single.dwg file into multiple.dxf, .dwg and.dff files and edit all the project in multiple sessions. To help you work on multiple project simultaneously, it provides a project environment for all project files. What is the GlobalProjector_Auto_Name It is a process that automatically assign a name to each project. However, it doesn't guarantee that all the projects will have the same names. If the name of project is changed, you have to change all the projects. How to use the GlobalProjector_Auto_Name Install Autodesk AutoCAD and activate it. Open the project file and locate the AutoCAD Main tab. On the load action, choose GlobalProjector_Auto_Name. How to use the GlobalProjector_Auto_Name with batch Follow the steps below. Load a project file and click GlobalProjector. A dialog box appears. In the dialog box, type the name of the batch file and click OK. Choose the batch action in the load project action. Notes 1. When the GlobalProjector is set to GlobalProjector_Auto_Name, a project name will be assigned to each project and each project will have the same name. 2. When you change the name of the project, you must change it for all projects. 3. If you want to share the GlobalProjector and the project files between two users and have them work on project files simultaneously, you should not use GlobalProjector_Auto_Name. In this case, the project names will be different between two users. 4.
