At the end of 2002, AutoCAD was one of the world's top 10 computer applications in terms of unit shipments, according to iProspect Market Share Report (February 2003). At that time, there were 9.5 million active user accounts for AutoCAD and Autodesk Inventor, in addition to 20.3 million active user accounts for Autodesk SketchBook. On January 26, 2003, Autodesk launched AutoCAD®2002. Also in 2003, Autodesk developed AutoCAD R12. AutoCAD R12 was a major update for the software, with the release in March 2003. AutoCAD R12 was the first update for AutoCAD to support 3-D modeling in AutoCAD. This article explores the history of AutoCAD. In 1963, Paul Brudzinski, a structural engineer at the American Institute of Steel Construction, purchased a second-hand copy of IBM's System/360 mainframe computer at a trade show in Dallas, Texas. He was studying a binder filled with brochures for CAD systems when he spotted one called Drafting Machine for Small and General Engineering. The brochure described a dedicated CAD system with a price tag of $5,000 (1963 dollars). At the same time, Brudzinski saw the final chapter in the history of punch cards. He was working at the annual convention of the American Institute of Steel Construction and was helping to present the Paper Presentation System (PSPS), a CAD program for drawing and dimensioning paper-made steel parts. Brudzinski knew PSPS could not be packaged on a dedicated CAD system. It was too complex, and would cost a fortune to develop. Drawing and dimensioning paper-made steel parts. The PSPS CAD program was created using punch cards. The manual, covering the complete processing of the punched cards, was stacked on the podium. The stack of paper could be easily mistaken for the CAD program. A technician at the American Institute of Steel Construction was using the same second-hand IBM mainframe computer Brudzinski bought at the Dallas trade show. When Brudzinski called, the technician explained the CAD program he was using was a third-party system for engineering analysis only. It was based on punch cards and used by the U.S. Army as part of its design system for guidance during production of weapons. The system was called the Computer-A
