Cast: Daniel Craig. Ratings:.A successful mapping of a clinical sepsis trial demonstrates the potential to define knowledge gaps in the treatment of an important condition. Sepsis is a major cause of death in the intensive care unit. The outcomes of a large-scale interventional trial, the Trial of Hydrocortisone for Presepsis (THOPPS), were used to evaluate the effect of early hydrocortisone. This was a randomised, controlled, double-blind study of septic patients with an infection and two or more danger signs. 4,837 patients were enrolled. On day 3 of enrolment, overall mortality was higher for those with renal or respiratory dysfunction. On day 7, overall mortality was lower for those who received early treatment (n=1,836). A significant interaction of the treatment by renal and respiratory dysfunction, age, sex, and multiple organ dysfunction revealed that early treatment benefits men aged  $\geq 65$  years and
